

Feedback from Dr Sonja Jovanoska from PDC Sv Spas, S Kravari, Bitola, Macedonia in regards to an observational attachment at Kings Colleague Hospital and attendance at Symposium Mammographicum Conference, Bournemouth 2014

I would like to express my gratitude to the trustees for supporting me to attend Symposium Mammographicum and inviting me for observational attachment at Kings Colleague Hospital. Having my practice done partly in Macedonia and partly in UK gives me an excellent opportunity to compare and implement both experiences in my daily routine.

The observational placement at Kings Colleague Hospital partially fulfills my goals. I had an opportunity to get a deep inside on how Tomosynthesis works and aids in diagnosis in real life and to go through a set of very interesting cases. Unfortunately, I did not have a chance to learn more about Contrast Enhanced Mammography because this is not yet implemented as a routine diagnostic tool. I also regret that there was no chance to get hands on training for vacuum assisted biopsy but I believe there would be a second opportunity for me in future. The team was very friendly and willing to share their experiences and made me feel very welcome.

However, the Symposium Mammographicum Conference was very informative and represented an excellent summary of new developments and evidence based breast radiology. I also had a chance to hear about usefulness and positive outcomes of Contrast Enhanced Mammography.

Once again, I would like to stress that I am very grateful to be given this opportunity and I would like you to keep on supporting overseas doctors to get the same experience.

Sincerely yours,

Dr Sonja Jovanoska

August 2014
