

Bursary Report

Khadijah Odubanjo, Nigeria

As per the report, I really appreciate given me the opportunity to attend the symposium through the bursary.

The lectures really broaden my knowledge on breast cancer diagnoses and biopsy with different techniques and modality.

The exhibition stands too were fantastic. I learned more about new innovation equipment for breast imaging and biopsy that reduce radiation, pain and stress that patient goes through during their diagnosis.

I have educated my colleagues about what I learned and also gave the booklets I got from the stand to my superiors to proposed it to the management in other to patronized the companies to improve service care.

Most of my colleagues wish to be part of the next symposium and I hope they will be granted bursary.

Thank you so much.
With best regards
